Camelot wheel cheat sheet

All 24 keys and the moves that keep your transitions in key.

Read it: the number is the position on the wheel, the letter is the mode. A is minor (inner ring), B is major (outer ring).

Safe moves: the same code, one step up or down on the same ring, or the same number with the other letter.

Energy boost: two steps clockwise, for example 8A to 10A. Use it on purpose: it can lift a set, but it's a bolder change.

Diagonal: one step counterclockwise and switch from A to B, for example 9A to 8B. Also a bolder move.

Wrap-around: 12 and 1 sit next to each other, so 12A to 1A is a safe move.

Tip: match the tempo first, then use the key.
